SOFTWARE ENGINEERING TRAINEE | SYSTEMS & AUTOMATION FOCUS

Former Systems Programmer with a strong foundation in enterprise systems, backend development, and data-driven problem solving. Experienced in designing and optimizing high-volume systems, integrating APIs, and building applications that translate complex requirements into structured technical solutions. Currently advancing full-stack development skills with a focus on backend systems, automation, and data flow. Known for analytical thinking, adaptability, and the ability to quickly learn and apply new technologies.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, C/C++, Java
- **Frontend:** React, HTML5, CSS3, Bootstrap
- **Backend:** Node.js, Express.js, RESTful APIs
- **Databases:** MongoDB, SQL, Redis
- **Tools:** Git, GitHub, VS Code
- **Concepts:** System Design, SDLC, Data Structures & Algorithms, API Integration
- **Other:** Scripting & Automation (Foundational), Technical Documentation, Debugging

RELEVANT TECHNICAL EXPERIENCE

Systems Programmer / Analyst

Worldspan | Atlanta, GA | 1999–2001

- Maintained and optimized high-volume, real-time communications systems in a Transaction Processing Facility (TPF) environment using Assembler and/or C, improving performance, reliability, and compliance with enterprise standards
- Executed system testing and validation for protocol migration from SLC to BATAP (X.25), ensuring seamless transition and minimal disruption to production systems
- Designed and implemented a RECOUP database solution to identify and eliminate invalid file addresses, improving data integrity and system efficiency
- Authored detailed technical specifications and system documentation for internal modules, contributing to the Online Documentation Library and supporting maintainability

EDUCATION

Per Scholas – Software Engineering Program (2026)

Full-stack training in MERN stack development, including HTML, CSS, JavaScript, TypeScript, React, Node.js, REST APIs, authentication, and responsive UI design.

Georgia Institute of Technology – Object-Oriented Development Certificate

Trained in object-oriented programming principles and software design, with application in Java and structured problem-solving.

Georgia State University – M.Ed., Secondary Mathematics

Spelman College – B.S., Mathematics (Computer Science Concentration)

Relevant Coursework – Data Structures & Algorithms, Computer Organization & Design, Operating Systems, Discrete Mathematics, Object-Oriented Programming (C++)

PROJECTS

Wanderlust Travel Tracker | TypeScript, Bootstrap, REST API

[Live Demo](#)

- Built a deployed travel-tracking app using REST Countries API
- Implemented authentication and persistent state with localStorage
- Developed filtering, tracking, and progress features
- Designed journaling and photo upload by country
- Created responsive UI with search and dark mode

GenAI Flashcards Study App | JavaScript, HTML, CSS

[Live Demo](#)

- Built an AI-assisted flashcard and matching application
- Accelerated development using GitHub Copilot and refined code quality
- Implemented dynamic logic for navigation, filtering, and validation
- Designed interactive UI with animations and responsive controls
- Added accessibility features and optimized performance

PROFESSIONAL EXPERIENCE

Real Estate Investor / Data Analyst

Self-Employed | Atlanta, GA | 2023–Present

- Conducted financial and market data analysis to evaluate investment opportunities, acquiring 3 properties exceeding target ROI benchmarks
- Built ROI models, budgeting tools, and risk assessments to guide acquisition and renovation strategy
- Managed end-to-end project lifecycle, including planning, execution, and delivery of renovation projects
- Coordinated cross-functional teams (contractors, vendors) to meet timeline, budget, and quality constraints

Data Consultant

Self-Employed | 2012–2023

- Leveraged Excel, Tableau, and SQL to build custom dashboards and reporting systems for K-12 schools, educational organizations, and small businesses
- Built custom assessment frameworks and benchmarking tools using Excel and SQL to track progress, identify performance gaps, and inform leadership decisions
- Conducted quantitative and trend analysis on large datasets to surface actionable insights, reducing decision-making time for stakeholders
- Developed automated reporting systems and dashboards to communicate KPIs and program outcomes to executive leadership and board-level audiences
- Facilitated training workshops for 10+ staff members, translating complex data findings into clear, actionable strategies that improved operational efficiency
